

State-of-the-Art Manufacturing Facilities

-  The combined experience of our Manufacturing Facility Staff total more than 100 years of advanced electronics development and production. Electronic Engineers, Software Developers, CAD Designers, and Assembly Teams all working to create the Min/Max signs.
-  The state-of-the-art manufacturing facility utilizes equipment such as the Panasonic Chip Shooter and Vision Equipped Pick-and-Place SMT equipment to insure repeatability and reliability.
-  We have an automated production line for surface mount and a semi-automated production line for through-hole circuit board assembly.
-  Quality control is performed diligently, insuring the production of reliable products. Every Min/Max Sign is inspected and tested to insure 100% customer satisfaction prior to shipment.
-  Each box enclosure is manufactured specifically for the Min/Max Sign using a CAM activated injection mold system.
-  Our company is committed to providing the highest quality products, support and service. This ensures that you get a product you can use and trust for many years to come!

The Programmable Min/Max Casino Message Sign

Features/Benefits:

-  Min/Max Message Displays are bright and highly visible.
-  Players can quickly select their desired table, which eliminates delays when entering the gaming floor and immediately puts players into action.
-  Min/Max signs are changed electronically using secure wireless technology, through RF, which can transmit up to 1/4 mile, or IrDA using a handheld device. Just plug-in this self contained unit and go!
-  Min/Max signs are an excellent management tool to instantly identify preferred table minimums and maintain awareness and control of all information being displayed in his/her pit, increasing efficiency, game security and decreasing miscommunication.
-  Each sign can be permanently mounted to the table. The displays have a rated life of over 10 years, 100,000 hours. This eliminates daily wear and tear. There are no replacement costs, as in traditional signs.
-  Signs are equipped with an internal clock.* Minimums can be programmed to increase or decrease at predetermined times, optimizing table profitability.
-  Face-plates are available in standard or custom designs. Our designers can work with you to create unique designs or provide templates that allow your design staff to create the face-plates.

*IrDA and RF models only
